

WHAT IS SCREEN TIGHT™?

Screen Tight™ is a patented porch screening system designed to eliminate the old cumbersome method of staples, nails, wooden lattice and paint. It provides the maintenance-free qualities of vinyl with the proven method of spline screening that adapts to wooden frame porches.

WHAT TYPE OF CUSTOMER WOULD USE SCREEN TIGHT™?

Screen Tight™ is designed for both the Do-it-yourselfers and professional installers. It can be used on both remodeling jobs and new construction.

WHAT TYPE OF SCREEN WORKS BEST WITH THE SCREEN TIGHT™ SYSTEM?

Fiberglass screen (including Sunscreen) works best in the Screen Tight™ system. Aluminum screen wire will work too.

WHAT SPLINE SIZE SHOULD BE USED IN THE SCREEN TIGHT SYSTEM?

Recommended spline sizes are:
Fiberglass Screen - .175"
Aluminum Screen - .160"

WILL SCREEN TIGHT™ SURVIVE THE ELEMENTS?

Yes! Screen Tight™ is made of an outdoor grade vinyl similar to that used on vinyl clad windows.

IS THE SCREEN TIGHT™ SYSTEM EXPENSIVE?

No! When you add up all the cost associated with the old method (wooden molding, paint, staples, nails, and replacement costs) and compare it to the one-time cost of the Screen Tight™ system, it becomes obvious that Screen Tight™ is the better investment. Everything you need to screen your porch usually costs approximately \$1.00 per square foot of opening. This would include fiberglass screen, spline, all Screen Tight™ components and screws.
